

Working alongside MGE Electrical.

We were initially contacted by MGE in November 2019 when we conducted a full site visit outlining the full potential and scope of the facilities. MGE were suitably impressed and began ordering from us. The relationship is conducted on a business partnering basis - not only do we manufacture plastic requirements to order, but we also offer advice and solutions involving improved product and technical design and process enhancements.

We take pride (given the current Covid environment) in supplying CE certified medical devices and components to the highest of standards and repeatedly meeting strict deadlines imposed by MGE. Success has bred success and, after starting from an

initial order in January 2020, Andrew Plastics is now responsible for managing the whole of MGE's plastic component procurement and stock requirements.

Andrew Plastics Company History.

Andrew Plastics Ltd was established in June 2013 traditionally fabricating plastic injection moulded products for the floristry, hospitality, and embroidery sectors. These sectors continue to provide a major proportion of the company's activities but, since the pandemic, more manufacturers have responded by de-risking their operations and subsequently re-shoring their supply chains. This has led to the development of other business relationships resulting in us producing plastic products for other medical, household, construction, transport, government and other sectors. We have proved ourselves adept at absorbing the needs of other businesses, from proof of concept and sample production, culminating in full production roll out.

Andrew Plastics Products.

As well as producing high standard plastic injection moulded products for a variety of clients, the business has recently significantly invested in its tool making, tool trialling, tool design, and contract trade mould facilities.

Contact Us.

Email: sales@andrewplastics.com

Web: www.andrewplastics.com

Our Tool Design and Tool Making Division has a wealth of knowledge and experience within the injection moulding sector allowing us to provide a first-class tool making service, whether this involves complete builds or repairs/servicing. We also offer a tool trialling service providing enhanced peace of mind to the end user. In addition, we provide manumold and sonic weld facilities, hot foiling, and pad printing to cater for more bespoke requirements.

As a result, we now view ourselves as having the capabilities to offer our customers the complete solution for all aspects of their plastic injection moulding requirements.

MGE Testimonial.

MGE plays a key role in the development of Andrew Plastics - they have always been receptive to our value-added suggestions and our mutual progression shows what can be achieved when a relationship becomes a true business partnership.
